
Solar double row linkage tracking system

How does a double row tracker work?

The Twin double row tracker uses the homokinetic drive as a key element. This solution allows both rows to work in perfect coordination but without the worry of keeping them aligned and exactly parallel to each other. American steel and fabricated torque tube's and foundations can be provided upon request.

What is a Tracker twin?

Engineered for reliability, the Tracker Twin features a wind-tunnel-tested structure for enhanced resistance to dynamic forces, ensuring maximum stability in most conditions. Its optimized torque tube section accelerates installation while maintaining precise alignment, reducing project timelines.

Why should I integrate SlopeSync with my solar projects?

By integrating SlopeSync into your solar projects, you are investing in a future-ready solution that aligns with DCE Solar's commitment to driving innovation and sustainability in the renewable energy sector. DCE Solar is committed to providing cutting-edge solar solutions that maximize efficiency, reliability, and long-term performance.

Grace Solar's Double Row Linkage Solar Tracking System revolutionizes large-scale solar farms with its patented dual-row design. Featuring AI-powered algorithms and multi-point drive ...

The self-developed two row linkage tracking system adopts larger cross-section and high-strength main beam, with better stiffness, higher natural vibration frequency and more safety and ...

Grace Solar's Double Row Linkage Solar Tracking System revolutionizes ground-mounted projects with its dual-row linkage design. Featuring high-strength main beams and AI-powered ...

SHR-HT1-Pro BINARY STAR-Double Rows Linkage The dual-row linkage tracking system adopts innovative design, which makes the production and installation simpler and more effective, cost-effective, intelligent operation ...

Double Row Linkage 1P Tracking System relies on mature technology and design, improving energization, tracking automatically, intelligent calculation, helping project developers and asset owners get the most from their ...

The SlopeSync tracker represents a breakthrough in solar technology, designed to optimize solar installations on uneven terrains. Unlike traditional solar trackers, SlopeSync is a dual-row tracker that seamlessly adapts to ...

The self-developed two row linkage tracking system adopts larger cross-section and high-

strength main beam, with better stiffness, higher natural vibration frequency and more safety and reliability. It is suitable for high ...

ESEEK-Twins Single-Axis Dual-Row PV Tracking System, Flexibly adapts to irregular terrain deviations and irregular geometric layouts.
